## *Introduction*

**1.1**

- The following chapter helps to select the necessary filter type dependent on the preamplifier and the probe.
- System orders with multiple probes require only the combined minimum set of filters.
- Only standard operation is guaranteed with the recommended filter configuration. Non-standard operation (observe on outer coil and decoupling on inner coil) may also be possible with the recommended filter configuration.

## Filter Configurations

- With individual probe orders the current configuration at the customer's labs should be obtained to avoid ordering filters which are already at the site.
- If your probe is not included in this list, please fill in the filter requirements questionnaire at the end of this chapter ([page 28](#)) and send it to BRUKER AG, Production Department.
- The exact order number for the corresponding magnet frequency can be taken from the „Available Filters“ list ([page 29](#)).
- No additional filters are necessary in the lock channel.
- No additional filters are necessary for HPPR CRP modules.
- All filters should be mounted on the HPPR and not on the probe
- In case of more than one filter, the 2H stop should be mounted closer to the HPPR
- Explanation of the filter nomenclature:

\*) LP=low pass, HP= high pass, BP=band pass

- For use of outfaced filters (not mentioned in Table [page 29](#)) see previous manual versions (Z31430 Index 1).

Special filters are required for CP MAS (up 500W transmitter power). Due to high decoupling power during acquisition, harmonics of the decoupling signal must be attenuated at least 40dB to prevent saturation of the preamplifier. Other signals (spurious, noise) in the decoupling signal at the observe frequency must be attenuated at least 80dB. For those reasons a bandpass is required in the decoupling path.

MAS bandpasses have generally the specifications mentioned above, power rating is 500W (100ms, 20% duty cycle).

Nomenclature of MAS filters is pass frequency and filter type following the system frequency and stop frequency range in brackets e.g. Z14067 FILTER 500 13C-BP (0-29Si,P-H). P means 31P and H means 1H.

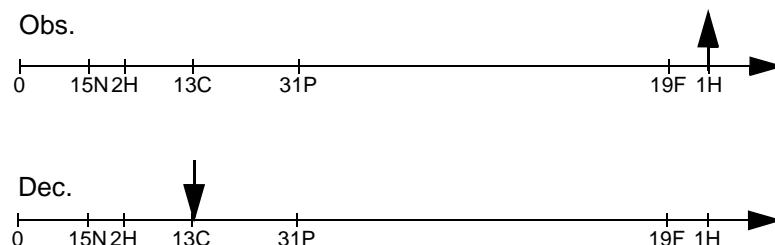

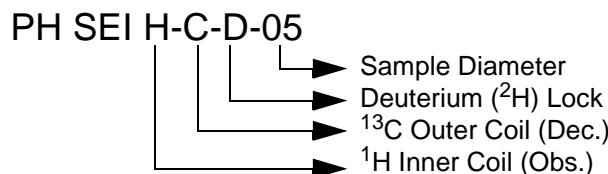

If 15N is the lowest used frequency, a lowpass can be used in this case e.g. Z14068 FILTER 500 15N-LP (2H-1H).

All high CP MAS compatible filters are marked with a \* in the table: "[Available Filters \(January 2000\)](#)" on page [29](#)

For more detailed information see the corresponding EC.

**Example:**

**Required Filters:**

Table 1.1. Required Filters for PH SEI H-C-D

Channel (Obs./Dec.)	Preamplifier Module Type	Required Filters
Observe Path 1H Preamplifier	1H LNA	
	1H Preamp	
Decoupling Path X-BB Preamplifier	X-BB19F 2HP	0-31P-LP (19F-3H)
	X-BB19F 2HS	2H Stop  0-31P-LP (19F-3H)
	X-BB31P 2HS	

13C Observe/ 1H Decoupling might be possible with this configuration.
